

Streetsbrook Infant & Early Years Academy

Cyber Security Policy

July 2026

Streetsbrook Infant & Early Years Academy

'Learning for Life'

At Streetsbrook, we strive to provide an equal chance for all to become responsible and caring citizens who lead happy and fulfilled lives, and are equipped with the skills and abilities to shape the world they live in.

Our Values are:

- **Self-Belief**
- **Belonging**
- **Respect**

These are embedded into our Nurturing Principles

Consideration of Further Notification	12
Evaluation	13
Monitoring and Review	13

This policy has been adopted from The National College.

Statement of Intent

Streetsbrook Infant & Early Years Academy is committed to maintaining the confidentiality, integrity and availability of its information and ensuring that the details of the finances, operations and individuals within the school are only accessible to the appropriate individuals. It is, therefore, important to implement appropriate levels of access, uphold high standards of security, take suitable precautions, and have systems and procedures in place that support this.

The school recognises, however, that breaches in security can occur. In schools, most breaches are caused by human error, so the school will ensure all staff are aware of how to minimise this risk. In addition, because most information is stored online or on electronic devices that can be vulnerable to cyber-attacks, the school will ensure there are procedures in place to prevent attacks occurring. To minimise both risks, it is necessary to have a contingency plan containing a procedure to minimise the potential negative impacts of any security breach, to alert the relevant authorities, and to take steps to help prevent a repeat occurrence.

Legal Framework

This policy has due regard to all relevant legislation and guidance including, but not limited to, the following:

- Computer Misuse Act 1990
- The UK General Data Protection Regulation (UK GDPR)
- Data Protection Act 2018
- National Cyber Security Centre (2018) 'Small Business Guide: Cyber Security'
- National Cyber Security Centre (N.D.) 'Cyber Essentials'
- ICO (2021) 'Guide to the UK General Data Protection Regulation (UK GDPR)'
- ESFA (2022) 'Academy trust handbook 2025'
- (DfE) 'Meeting digital and technology standards in schools and colleges'

This policy operates in conjunction with the following school policies:

- Data Protection Policy
- Online Safety Policy
- Disciplinary Policy and
- Behaviour Policy
- Social Media Policy
- Remote Education Policy

Types of Security Breach and Causes

Unauthorised use without damage to data – involves unauthorised persons accessing data on the school system, e.g. 'hackers', who may read the data or copy it, but who do not actually damage the data in terms of altering or deleting it. This includes unauthorised people within the school, e.g. schools where pupils access systems that staff have left open and/or logged in, or where staff access data beyond their authorisation, as can occur in schools where all staff are given admin-level access for ease.

Unauthorised removal of data – involves an authorised person accessing data, who removes the data to pass it on to another person who is not authorised to view it, e.g. a staff member with authorised access who passes the data on to a friend without authorised access. This is also known as data theft. The data may be forwarded or deleted altogether.

Damage to physical systems – involves damage to the hardware in the school's ICT system, which may result in data being inaccessible to the school and/or becoming accessible to unauthorised persons.

Unauthorised damage to data – involves an unauthorised person causing damage to data, either by altering or deleting it. Data may also be damaged by a virus attack, rather than a specific individual.

Breaches in security may be caused by the actions of individuals, and may be accidental, malicious or the result of negligence:

- Accidental breaches can occur as a result of human error or insufficient training for staff, so they are unaware of the procedures to follow

- Malicious breaches can occur as a result of a hacker wishing to cause damage to the school through accessing and altering, sharing or removing data

Breaches caused by negligence can occur as a result of a staff member knowingly disregarding school policies and procedures or allowing pupils to access data without authorisation and/or supervision. Breaches in security may also be caused by system issues, which could involve incorrect installation, configuration problems or operational errors:

- The incorrect installation of antivirus software and/or use of outdated software can make the school software more vulnerable to a virus
- Incorrect firewall settings being applied, e.g. unrestricted access to the school network, can allow unauthorised individuals to access the school system
- Operational errors, such as confusion between back-up copies of data, can cause the most recent data to be overwritten

Roles and Responsibilities

The governing board will be responsible for:

- Ensuring the school has appropriate cyber-security measures in place.
- Ensuring the school has an appropriate approach to managing data breaches in place.
- Supporting the Headteacher and other relevant staff in the delivery of this policy.
- Ensuring the school meets the relevant cyber-security standards.

The Headteacher will be responsible for:

- Ensuring all staff members and pupils are aware of their responsibilities in relation to this policy.
- Ensuring appropriate user access procedures are in place.
- Responding to alerts for access to inappropriate content in line with the Online Safety Policy.
- Organising training for staff members in conjunction with the online safety officer and DPO.
- Appointing an appropriately qualified staff member log of cyber-security incidents is maintained.

The DPO will be responsible for:

- The overall monitoring and management of data security.
- Deciding which strategies are required for managing the risks posed by internet use.
- Leading on the school's response to incidents of data security breaches, including leading the cyber recovery team.
- Ensuring the plans and actions of the school relating to data and cyber security are compliant with data protection laws.
- Assessing the risks to the school in the event of a cyber-security breach.
- Determining which organisations and individuals need to be notified following a data security breach, and ensuring they are notified.
- Working with the ICT Technician at Solihull MBC, online safety officer and Headteacher after a data security breach to determine where weaknesses lie and improve security measures.
- Monitoring and reviewing the effectiveness of this policy, alongside the Headteacher, and communicating any changes to staff members.

The ICT Technician at Solihull MBC will be responsible for:

- Maintaining an inventory of all ICT hardware and software currently in use at the school.
- Ensuring any out-of-date software is removed from the school systems.
- Implementing effective firewalls to enhance network security and ensuring that these are monitored regularly.
- Installing, monitoring and reviewing filtering systems for the school network.
- Setting up user privileges in line with recommendations from the Headteacher.
- Removing any inactive users from the school system and ensuring that this is always up-to-date.
- Installing appropriate security software on staff members' personal devices where the Headteacher has permitted for them to be used for work purposes.

- Performing a back-up of all electronic data held by the school, ensuring detailed records of findings are kept.
- Ensuring all school-owned devices have secure malware protection and are regularly updated.
- Recording any alerts for access to inappropriate content and notifying the Headteacher.

The online safety officer will be responsible for:

- Organising training and resources for staff on online safeguarding risks and preventative measures.
- Taking responsibility for online safety within the school and promoting online safety measures to parents.
- Ensuring the relevant policies and procedures are in place to protect pupils from harm, including the Online Safety Policy.
- Monitoring online safety incidents which could result in data breaches and reporting these to the DPO.
- Acting as the named point of contact within the school on all online safety issues.
- Liaising with relevant members of staff on online safety matters, e.g. the DPO and ICT Technician at Solihull MBC.

The DSL will be responsible for:

- Assessing whether there is a safeguarding aspect to any cyber-security incident and considering whether any referrals need to be made.

All staff members will be responsible for:

- Understanding their responsibilities in regard to this policy.
- Undertaking the appropriate training.
- Ensuring they are aware of when new updates become available and how to safely install them.

Secure Configuration

An inventory will be kept of all ICT hardware and software currently in use at the school. The inventory will be stored in the Business Manager's office and will be audited on a termly basis to ensure it is up-to-date. Any changes to the ICT hardware or software will be documented using the inventory and will be authorised by the ICT Technician at Solihull MBC before use.

All systems will be audited on a termly basis by the ICT Technician at Solihull MBC to ensure the software is up-to-date. Any new versions of software or new security patches will be added to systems, ensuring that they do not affect network security, and will be recorded in the inventory. Any software that is out-of-date or reaches its 'end of life' will be removed from systems, e.g. when suppliers end their support for outdated products, meaning that the product is not able to fulfil its purpose anymore.

All hardware, software and operating systems will require passwords from individual users. The school believes that locking down hardware, such as through the use of strong passwords, is an effective way to prevent access to facilities by unauthorised users. Passwords will need to adhere to a specific character length, use special characters, and not be obvious or easy to guess, in line with the school's policy on passwords.

The school will consider referring to the five security controls outlined in the National Cyber Security Centre's (NCSC's) 'Cyber Essentials'. These are:

- Firewalls – Firewalls function as a barrier between internal networks and the internet. They will be installed on any device that can access the internet, particularly where staff are using public or otherwise insecure Wi-Fi.
- Secure configuration – The default configurations on devices and software are often as open as possible to ensure ease of use, but they also provide more access points for unauthorised users. The school will disable or remove any unnecessary functions and change default passwords to reduce the risk of a security breach.

- Access control – The more people have access to data, the larger the chance of a security breach. The school will ensure that access is given on a 'need-to-know' basis to help protect data. All accounts will be protected with strong passwords, and where necessary, two-factor authorisation.
- Malware protection – The school will protect itself from malware by installing antivirus and anti-malware software, and using techniques such as whitelisting (a cyber-security strategy under which a user can only take actions on their computer that an administrator has explicitly allowed in advance) and sandboxes (an isolated virtual machine in which potentially unsafe software code can execute without affecting network resources or local applications).
- Patch management – The school will install software updates as soon as they are available to minimise the time frame in which vulnerabilities can be exploited. If the manufacturer stops offering support for the software, the school will replace it with a more up-to-date alternative.

The ICT Technician from Solihull MBC will:

- Protect every device with a correctly configured boundary, or software firewall, or a device that performs the same function.
- Change the default administrator password or disable remote access on each firewall.
- Protect access to the firewall's administrative interface with multi-factor authentication (MFA), or a small, specified IP-allow list combined with a managed password or prevent access from the internet entirely.
- Keep firewall firmware up to date.
- Check monitoring logs as they can be useful in detecting suspicious activity.
- Block inbound unauthenticated connections by default.
- Document reasons why particular inbound traffic has been permitted through the firewall.
- Review reasons why particular inbound traffic has been permitted through the firewall often, change the rules when access is no longer needed.
- Enable a software firewall for devices used on untrusted networks, like public wi-fi.

Network Security

The school's firewall will be deployed locally, which means the broadband service connects to a firewall that is located on an appliance or system on the school premises, as either discrete technology or a component of another system. As the school's firewall is managed locally by a third party, Solihull MBC, the firewall management service will be thoroughly investigated by the ICT Technician at Solihull MBC to ensure that:

- The firewall is checked weekly for any changes and/or updates, and that these are recorded using the inventory.
- Any changes and updates that are logged by authorised users within the school are undertaken efficiently by the provider to maintain operational effectiveness.
- The firewall is also checked weekly to ensure that a high level of security is maintained, and that there is effective protection from external threats.
- Any compromise of security through the firewall is recorded using an incident log and is reported to the DPO. The ICT Technician at Solihull MBC will react appropriately to security threats to find new ways of managing the firewall.

The school will be aware that security standards may change over time with changing cyber threats, and that the security of every device on its network is reviewed regularly. The school will agree with the ICT Technician at Solihull MBC at Solihull MBC, a system for recording and reviewing decisions made about network security features.

To ensure that the network is as secure as possible, the school will:

- Keep a register, list, or diagram of all the network devices.
- Avoid leaving network devices in unlocked or unattended locations.
- Remove or disable unused user accounts, including guest and unused administrator accounts.
- Change default device passwords.
- Require authentication for users to access sensitive school data or network data.
- Remove or disable all unnecessary software according to your organisational need.
- Disable any auto-run features that allow file execution.

- Set up filtering and monitoring services to work with the network's security features enabled.
- Immediately change passwords which have been compromised or suspected of compromise.
- Protect against a brute-force attack on all passwords by allowing no more than 10 guesses in five minutes, or locking devices after no more than 10 unsuccessful attempts.

Unlicensed hardware or software will never be used by the school.

All unpatched or unsupported hardware or software will be replaced by the ICT Technician at Solihull MBC from Solihull MBC. Where it is not possible to replace these devices, they will have their access to the internet removed so that scanning tools cannot find weaknesses.

Malware Prevention

The school understands that malware can be damaging for network security and may enter the network through a variety of means, such as email attachments, social media, malicious websites or removable media controls.

The ICT Technician at Solihull MBC will ensure that all school devices have secure malware protection and undergo regular malware scans in line with specific requirements. The ICT Technician at Solihull MBC will update malware protection on a termly basis to ensure it is up-to-date and can react to changing threats. Malware protection will also be updated in the event of any attacks to the school's hardware and software.

Staff will follow procedures for filtering and monitoring to keep pupils safe as set out in the Online Safety Policy.

The school's filtering provider will be:-

- A member of the Internet Watch Foundation (IWF)
- Signed up to Counter-Terrorism Internet Referral Unit List (CITRU)
- Effective at blocking access to illegal content

The filtering system will be able to identify technologies and techniques that allow users to get around the filtering such as VPNs and proxy services and block them, and provide alerts when any web content has been blocked

Filtering of websites will ensure that access to websites with known malware are blocked immediately and reported to the ICT Technician at Solihull MBC at Solihull MBC.

The school will use mail security technology, which will detect and block any malware that is transmitted by email. This will also detect any spam or other messages which are designed to exploit users. The Network Team at Solihull MBC will review the mail security technology on a daily basis to ensure it is kept up-to-date and effective.

Staff members are only permitted to download apps on any school-owned device from manufacturer-approved stores and with prior approval from the online safety officer. Where apps are installed, the ICT Technician at Solihull MBC will keep up-to-date with any updates, ensuring staff are informed of when updates are ready and how to install them.

The school will use anti-malware software that:

- Is set up to scan files upon access, when downloaded, opened, or accessed from a network folder.
- Scans web pages as they are accessed.
- Prevents access to potentially malicious websites, unless risk-assessed, authorised and documented against a specific business requirement.

User Privileges and Passwords

The school understands that controlling what users have access to is important for promoting network security and data protection. User privileges will be differentiated, e.g. pupils will have different access to data and the network than members of staff, whose access will also be role-based.

All users will be required to change their passwords if they become known to other individuals, in line with the 'Secure configuration' section of this policy. Staff and pupils are responsible for remembering their passwords; however, the ICT Technician at Solihull MBC will have an up-to-date record of all usernames

and will be able to reset passwords if necessary. The record of all usernames and passwords is encrypted. Only the ICT Technician at Solihull MBC will have access to this inventory. Multi-factor authentication (multiple different methods of verifying the user's identity) will be used wherever possible.

Automated user provisioning systems will be employed in order to automatically delete inactive users or users who have left the school. The ICT Technician at Solihull MBC will manage this provision to ensure that all users that should be deleted are, and that they do not have access to the system.

Password strength will be enforced at a system level – the school will use a deny list for automatic blocking of common passwords, and passwords must contain a minimum of eight characters.

The school will implement a user account creation, approval and removal process which is part of the school joining and leaving protocols.

The school uses multi-factor authentication, for accounts that have access to sensitive or personal data.

Monitoring Usage

Monitoring user activity is important for the early detection of attacks and incidents, as well as inappropriate usage by pupils or staff. The school will inform all pupils and staff that their usage will be monitored, as well as how it is being monitored and why, in accordance with the school's Online Safety Policy. If a user accesses inappropriate content or a threat is detected, an alert will be sent to the ICT Technician at Solihull MBC. Alerts will also be sent for unauthorised and accidental access. Alerts will identify the user, the activity that prompted the alert, and the information or service the user was attempting to access.

The ICT Technician at Solihull MBC will record any alerts using an incident log and will report this to the DPO. The DPO will then inform the Headteacher and online safety officer as appropriate. All incidents will be responded to in accordance with the 'Data Security Breach Incidents' section of this policy, and as outlined in the Online Safety Policy.

The ICT Technician at Solihull MBC will ensure that websites are filtered on a weekly basis for inappropriate and malicious content. Any member of staff or pupil that accesses inappropriate or malicious content will be recorded in accordance with the monitoring process in the 'Data Security Breach Incidents' section of this policy.

All data gathered by monitoring usage will be kept on a secure shared drive for easy access when required. This data may be used as a method of evidence for supporting a not-yet-discovered breach of network security. In addition, the data may be used to ensure the school is protected and all software is up-to-date.

Removable Media Controls

The school understands that pupils and staff may need to access the school network from outside the school premises. Effective security management will be established to prevent access to, or leakage of, data, as well as any possible risk of malware.

The ICT Technician at Solihull MBC will encrypt all school-owned devices for personal use, such as laptops, USB sticks, mobile phones and tablets, to ensure that they are password protected. If any portable devices are lost, this will prevent unauthorised access to personal data.

Before distributing any school-owned devices, the ICT Technician at Solihull MBC will ensure that manufacturers' default passwords have been changed. A set password will be chosen, and the staff member will be prompted to change the password once using the device. The ICT Technician at Solihull MBC will check school-owned devices on a termly basis to detect any unchanged default passwords.

When using laptops, tablets and other portable devices, the headteacher will determine the limitations for access to the network, as described in the 'Network security' section of this policy.

Staff who use school-owned laptops, tablets and other portable devices will use them for work purposes only, whether on or off the school premises. Staff will avoid connecting to unknown Wi-Fi hotspots, such as in coffee shops, when using any school-owned laptops, tablets or other devices, or when accessing school networks.

The online safety officer will use encryption to filter the use of websites on school-owned devices in order to prevent inappropriate use and external threats which may compromise network security when bringing the device back onto the premises. The school uses tracking technology where possible to ensure that lost or stolen school-owned devices can be retrieved.

All data will be held on systems centrally in order to reduce the need for the creation of multiple copies, and/or the need to transfer data using removable media controls.

The Wi-Fi network at the school will be password protected and will only be given out as required. Staff and pupils are not permitted to use the Wi-Fi for their personal devices, such as mobile phones or tablets, unless agreed prior to usage. A separate Wi-Fi network will be established for visitors at the school to limit their access to school networks and any other applications which it is not necessary for them to access.

Home Working and Remote learning

Staff and pupils will adhere to data protection legislation and the school's related policies when working remotely. Staff will receive annual training regarding what to do if a data protection issue arises from any home working or remote learning.

Wherever possible, personal data will not be taken home by staff members for the purposes of home working, due to the risk of data being lost or the occurrence of a data breach.

Staff and pupils are not permitted to let their family members or friends use any school equipment, in order to protect the confidentiality of any personal data held on the device. This may result in a data breach that the school would need to record and potentially report to the ICO.

Staff who require access to personal data to enable them to work from home will first seek approval from the headteacher, and it will be ensured that the appropriate security measures are in place by the ICT Technician at Solihull MBC and the DPO, e.g. secure passwords and anti-virus software.

Staff will be informed that caution should be exercised while accessing personal data if an unauthorised person is in the same room. If a member of staff needs to leave their device unattended, the device should be locked. School devices will automatically lock after one minute of inactivity to avoid an unauthorised person gaining access to the device. Where staff are using a personal device, they will be advised that a similar function should be implemented.

To ensure reasonable precautions are taken when managing data, staff will avoid:

- Keeping personal data on unencrypted hard drives.
- Sending work emails to and from personal email addresses.
- Leaving logged-in devices and files unattended.
- Using shared home devices where other household members can access personal data.
- Using an unsecured Wi-Fi network.

Staff working from home will be encouraged and enabled to go paperless, where possible, as paper files cannot be protected digitally and may be misplaced. If sensitive data is taken off the school premises to allow staff to work from home, it will be transported in a lockable bag or container. The school's procedures for taking data off the school premises will apply to both paper-based and electronic data.

Staff will be expected to exercise particular vigilance when using school ICT equipment outside the workplace. Appropriate precautions will be taken, as required from time to time, to prevent the importation of viruses or the compromise of system security.

The system may contain information that is confidential and/or subject to data protection legislation. Such information will be handled with the utmost care and in strict accordance with the school's Data Protection Policy.

All staff working remotely will be required to comply fully with this policy and the Data Protection Policy at all times.

Staff should avoid taking physical copies of data, e.g. paper documents, off school premises unless absolutely necessary, such as when a digital version of the data does not exist. When taking physical copies of data off the school premises, staff will sign out the documents at the school office. The physical data will be signed back in when staff return it.

Any devices that are used by staff for remote working and learning will be assessed by the ICT Technician at Solihull MBC prior to being taken to the home setting, using the following checks:

- System security check – the security of the network and information systems
- Data security check – the security of the data held within the systems
- Online security check – the security of any online service or system, e.g. the school website
- Device security check – the security of the personal device, including any 'bring your own device' systems

The ICT Technician at Solihull MBC will provide staff with details and instructions for accessing the school network that they will be using throughout the duration of the remote working and learning period.

In the event that a staff member decides to leave the school permanently, all data in any form will be returned on or before their last day. The ICT Technician at Solihull MBC will then ensure that the said staff member or pupil no longer has access to the school network.

Backing Up Data

The ICT Technician at Solihull MBC performs a back-up of all electronic data held by the school on a termly basis, and the date of the back-up is recorded using a log. Each back-up is retained for three months before being deleted. The ICT Technician at Solihull MBC performs an incremental back-up on a monthly basis of any data that has changed since the previous back-up. The ICT Technician at Solihull MBC will record the date of any incremental back-up, alongside a list of the files that have been included in the back-up.

The ICT Technician at Solihull MBC will ensure that there are at least three backup copies of important data, on at least two separate devices – one of which will remain off-site, e.g. cloud backups. The school will ensure any cloud servers used for backups encrypt this data to the state-of-the-art encryption standard, and all required data protection agreements are in place between the school and the cloud service provider.

The number of devices with access to back up data will be kept to an absolute minimum. The school must follow the NCSC's guidance on backing up data where necessary, including:

- Identifying what essential data needs to be backed up.
- Storing backed-up data in a separate location to the original data.
- Considering using the Cloud to store backed-up data.
- Referring to the NCSC's Cloud Security Guidance.
- Ensuring that backing up data is regularly practised.

The school will keep under review where servers can be replaced with cloud solutions, including accessing files, documents and shared folders. Where cloud solutions are used, the school will confirm its ICT provider ensures that data is portable and allows for:

- Secure encrypted transfer using a state-of-the-art encryption standard such as AES 256.
- Data export to an open standard or commonly used format.
- Data links through secure, documented application programming interfaces (APIs).
- A timely process for data transfer in an open standard or neutral format if the school ends the contract.
- Easy and secure access from a range of devices.

Where possible, back-ups will take place overnight and be completed before the beginning of the next school day. Upon completion of back-ups, data will be stored on the school's password protected hardware. Data will be replicated and stored in accordance with the school's Data Protection Policy. Only authorised personnel will be able to access back-ups of the school's data.

The school's back-up strategy will be tested on an ongoing basis. All testing will be recorded.

Avoiding Phishing Attacks

The ICT Technician at Solihull MBC will configure all staff accounts using the principle of 'least privilege' – staff members are only provided with as much rights as are required to perform their jobs.

Designated individuals who have access to the master user account will avoid browsing the web or checking emails whilst using this account. Two-factor authentication is used on any important accounts, such as the master user account, or any key accounts, such as the Headteacher's or SBM's accounts.

Staff will use the following warning signs when considering whether a communication may be unusual:

- Is it from overseas?
- Is the spelling, grammar and punctuation poor?
- Is the design and quality what you would expect from a large organisation?
- Is it addressed to a 'valued customer', 'friend' or 'colleague'?
- Does it contain a veiled threat that asks the staff member to act urgently?
- Is it from a senior member of the school asking for a payment?
- Is it from a supplier advising of a change in bank account details for payment?
- Does it sound too good to be true? It is unlikely someone will want to give another individual money or access to another service for free.
- Is it from a generic email address, such as Gmail or Hotmail?

The ICT Technician at Solihull MBC will ensure that an appropriate email filtering system is used to identify which emails would be classed as junk or spam, applied in accordance with the 'Malware prevention' section of this policy. The ICT Technician at Solihull MBC will ensure that the filtering system is neither too strict nor too lenient, to allow the correct emails to be sent to the relevant folders.

Staff complete Cyber Security Training through The National College.

The ICT Technician at Solihull MBC will also conduct phishing simulations throughout the year and record the statistics relating to those who reported the phishing and those who clicked the links. These statistics will be reported to the headteacher.

Social Media and Website Data

To prevent anyone having access to unnecessary personal information, the DPO will ensure the school's social media accounts and websites are reviewed on a termly basis, making sure that only necessary information is shared. The Headteacher and DPO will ensure the school's Social Media Policy includes expectations for sharing of information and determines what is and is not appropriate to share.

The Headteacher will ensure parents, pupils, staff and other members of the school community are aware of acceptable use of social media and the information they share about the school and themselves.

User Training and Awareness

The DPO and Headteacher will arrange training for staff on an annual basis to ensure they are aware of how to use the network appropriately. This will cover identifying irregular methods of communication in order to help staff members spot requests that are out of the ordinary, such as receiving an invoice for a service not used, and who to contact if they notice anything unusual. Unusual communications could come in a variety of forms, e.g. emails, phone calls, text messages or social media messages.

The online safety officer will arrange for staff to undertake the appropriate training relating to online safety issues.

The DPO will also arrange training for staff on an annual basis on maintaining data security, preventing data breaches, and how to respond in the event of a data breach. Training for all staff members will be arranged by the online safety officer and DPO within two weeks following an attack, breach or significant update.

Through training, all staff will be aware of who they should inform first in the event that they suspect a security breach, and who they should inform if they suspect someone else is using their passwords.

Staff with access to the school's ICT network will be required to undertake basic cyber-security training upon induction which is refreshed every year. At least one member of the governing board will also take part in this training. The training will focus on the following:

- Phishing
- Password security
- Social engineering
- Securing data

All users will be made aware of the disciplinary procedures for the misuse of the network leading to malicious attacks, in accordance with the process detailed in the Behavioural Policy and the Disciplinary Policy and Procedure.

Cyber-Security Incidents

All cyber-security incidents will be managed in line with the school's Cyber Response and Recovery Plan. The school will recognise that educational institutions, including schools, continue to be targeted by cybercriminals, and will implement appropriate measures to mitigate associated risks.

The school is aware that the government proposes to ban ransom payments by public sector organisations – including schools – and to introduce mandatory cyber-incident reporting through the forthcoming Cyber Security and Resilience Bill. Once these measures are formally enacted, the school will update this policy to ensure full compliance.

Any individual that discovers a cyber-security incident will report this immediately to the Headteacher and the DPO.

When an incident is raised, the DPO will record the following information:

- Name of the individual who has raised the incident
- Description and date of the incident
- Description of any perceived impact upon and level of risk to individuals including the type of data involved in the incident
- Description and identification codes of any devices involved, e.g. school-owned laptop
- Location of the equipment involved
- Contact details for the individual who discovered the incident
- Whether the incident needs to be reported to the relevant authorities, e.g. the ICO or police

The school's DPO will take the lead in investigating the incident, with assistance from the cyber recovery team, and will be allocated the appropriate time and resources to conduct this. The DPO, as quickly as reasonably possible, will ascertain the severity of the incident and determine if any personal data is involved or has been compromised. The DPO will oversee a full investigation and produce a comprehensive report. The cause of the incident, and whether it has been contained, will be identified – ensuring that the possibility of further loss or jeopardising of data is eliminated or restricted as much as possible.

If the DPO determines that the severity of the security breach is low, the incident will be managed in accordance with the following procedures:

- In the event of an internal breach, the incident is recorded using an incident log, and by identifying the user and the website or service they were trying to access
- The headteacher will issue disciplinary sanctions to the pupil or member of staff who caused the breach, in accordance with the Behavioural Policy or Disciplinary Policy and Procedure
- In the event of any external or internal breach, the DPO will record this using an incident log and respond appropriately, e.g. by updating the firewall, changing usernames and passwords, updating filtered websites or creating further back-ups of information
- The school will organise updated staff training following a breach
- Any further action which could be taken to recover lost or damaged data will be identified – this includes the physical recovery of data, as well as the use of back-ups

If the DPO determines that the severity of the security breach is high, the incident will be managed in accordance with the following procedures further to the above procedures (where applicable):

- The DPO will work with the internal and external breach response team including ICT Technician at Solihull MBC, the headteacher and other relevant staff to immediately investigate the breach, its source, the method of attack and which systems and data have been affected.
- Compromised or suspected compromised systems will be isolated from the network and taken offline.
- The DPO will keep a record of any personal data breaches along with whether the ICO and individuals were notified along with the reasons for this.
- Retrieving any lost, stolen or otherwise unaccounted for data.
- Restricting access to systems entirely or to a small group.
- Backing up all existing data and storing it in a safe location.
- Reviewing basic security, including:
 - Changing passwords and login details on electronic equipment.
 - Ensuring access to places where electronic or hard data is kept is monitored and requires authorisation.
- The school will cooperate in a timely manner with the relevant regulators and law enforcement bodies to investigate the breach.
- Communications with staff, pupils, parents and any other interested parties will be carried out only in accordance with the strategy agreed with breach response team.
- Immediate steps will be taken to remediate the breach by securing and restoring affected systems and ensuring the necessary security measures are taken.
- All lost personal data should be recovered as soon as possible from back-ups.
- The relevant internal stakeholders of the school will be informed and updated of the breach.

Where appropriate, e.g. if offences have been committed under the Computer Misuse Act 1990, the DPO will inform the police of the security breach.

The school will be required to report any personal data breaches to the ICO where there is a likelihood of risk to individuals' rights and freedoms. Where the DPO determines that such a risk is unlikely, the breach will not be reported; however, the school will document the breach in full and justify the decision not to report.

The DPO will notify the ICO within 72 hours of becoming aware of a breach where it is likely to result in a risk to the rights and freedoms of individuals.

The UK GDPR recognises that it will not always be possible to investigate a breach fully within 72 hours. The information required can be provided in phases, as long as this is done without undue further delay.

In line with the UK GDPR, the following will be provided to the ICO when reporting a personal data breach:

- A description of the nature of the breach, including, where possible:
 - The categories and approximate number of individuals concerned
 - The categories and approximate number of personal data records concerned
- The name and contact details of the DPO
- A description of the likely consequences of the breach
- A description of the measures taken, or proposed to be taken, to deal with the breach
- A description of the measures taken to mitigate any possible adverse effects, where appropriate

The school will report a personal data breach via the **ICO website**. The school will also make use of the ICO's **self-assessment tool** to determine whether reporting a breach is a necessary next step.

Where a breach is likely to result in a high risk to the rights and freedoms of individuals, the DPO will notify those concerned directly of the breach without undue delay.

Where the school has been subject to online fraud, scams or extortion, the DPO will also report this using the **Action Fraud** website.

The DPO and ICT Technician at Solihull MBC will test all systems to ensure they are functioning normally, and the incident will only be deemed 'resolved' when it has been assured that the school's systems are safe to use.

The trust is aware it must seek permission from the ESFA to pay any cyber-ransom demands in the event of a cyber-crime.

Assessment of Risks

The following questions will be considered by the DPO to fully and effectively assess the risks that the cyber-security breach has brought, and to help take the next appropriate steps. All relevant questions will be clearly and fully answered in the DPO's report, which should record:

- What type of, and how much, data is involved?
- How sensitive is the data? Sensitive data is defined in the UK GDPR; some data is sensitive because of its very personal nature (e.g. health records) while other data types are sensitive because of what might happen if it is misused (e.g. bank account details).
- Is it possible to identify what has happened to the data – has it been lost, stolen, deleted or tampered with?
- If the data has been lost or stolen, were there any protective measures in place to prevent this, such as data and device encryption?
- If the data has been compromised, have there been effective measures in place that have mitigated the impact of this, such as the creation of back-up tapes and spare copies?
- Have individuals' personal data been compromised – how many individuals are affected?
- Who are these individuals – are they pupils, staff, governors, volunteers, stakeholders, suppliers?
- Could their information be misused or manipulated in any way?
- Could the data be used to commit identity fraud?
- Could harm come to individuals? This could include risks to the following:
 - Physical safety
 - Emotional wellbeing
 - Reputation
 - Finances
 - Identity
 - Private affairs becoming public
- Are there further implications beyond the risks to individuals? Is there a risk of loss of public confidence and/or damage to the school's reputation, or risk to the school's operations?
- Who could help or advise the school on the breach? Could the LA, external partners, authorities, or others provide effective support?
- Does the breach need to be reported to the ICO? If so, has it been successfully reported without undue delay?

In the event that the DPO, or other persons involved in assessing the risks to the school, are not confident in the assessment of risk, they will seek advice from the ICO.

Consideration of further notification

The DPO will consider whether there are any legal, contractual or regulatory requirements to notify individuals or organisations that may be affected or who will have an interest in data security.

The DPO will assess whether notification could help the individual(s) affected, and whether the individual(s) could act on the information provided to mitigate risks, e.g. by cancelling a credit card or changing a password. In line with the 'Data security breach incidents' section of this policy, if a large number of people are affected, or there are very serious consequences, the ICO will be informed.

The DPO will consider who to notify, what to tell them and how they will communicate the message, which may include:

- A description of how and when the breach occurred and what data was involved.
- Details of what has already been done to respond to the risks posed by the breach.
- Specific and clear advice on the steps they can take to protect themselves, and what the school is willing to do to help them.
- A way in which they can contact the school for further information or to ask questions about what has occurred.

The DPO will consider, as necessary, the need to notify any third parties, such as the police, insurers, professional bodies, funders, trade unions, website and/or system owners, banks and/or credit card companies, who can assist in helping or mitigating the impact on individuals.

Evaluation

The DPO will document all the facts regarding the breach, its effects and the remedial action taken. This should be an evaluation of the breach, and what actions need to be taken forward. The DPO will consider the data and contexts involved, establish the root of the breach, and where any present or future risks lie, taking into consideration whether the breach is a result of human or systematic error and see how a recurrence can be prevented.

The DPO and Headteacher will identify any weak points in existing security measures and procedures. The DPO will work with the ICT Technician at Solihull MBC to improve security procedures wherever required. The DPO and Headteacher will identify any weak points in levels of security awareness and training.

The DPO will report on findings and implement the recommendations of the report after analysis and discussion.

Monitoring and Review

The DPO will be responsible for monitoring the effectiveness of this policy, amending necessary procedures and communicating any changes to staff members.

This policy was last reviewed in March 2023 and will be reviewed annually.

This policy was ratified by Governors at the Finance Risk & Audit Meeting on 10 June 2026.
